POST /api/auth/facebook_token - - ms - -

```

Monitoreo:

No se pudo realizar esta parte debido al requerimiento de una tarjeta de crédito.

Uso del api desde heroku:

The first screenshot shows a REST client interface with the title "Copy of get usuarios". The method is set to GET and the URL is `https://red-bicicletas-mauri.herokuapp.com/api/usuarios`. The status bar indicates "length: 55 byte(s)". The response section shows a "200 OK" status and a body containing a JSON array of users, with the first user's details visible: `{ "verificado": false, "_id": "5f77b346d4c319264489129f", ... }`.

The second screenshot shows a similar interface but with a more detailed response. The status is "200 OK" and the body contains a JSON array of users. The first user's details are expanded, showing: `{ "verificado": false, "_id": "5f77b346d4c319264489129f", "nombre": "Juan", "apellido": "Perez", "email": "juan.perez@example.com", "telefono": "1234567890", "direccion": "Calle Falsa 123", "ciudad": "Buenos Aires", "pais": "Argentina", "fecha_nacimiento": "1990-01-01", "fecha_registro": "2023-09-01", "estado": "activo", "rol": "usuario", "password": "1234567890" }`. The response headers are also visible, including "Server: Cowboy", "Connection: keep-alive", "X-Powered-By: Express", "Content-Type: application/json; charset=utf-8", "Content-Length: 385 bytes", "Etag: W/\"181-gM4uLbF83KCsoZxAPHgNi2nu3cM\"", "Date: Sun, 04 Oct 2020 18:31:41 GMT +15s", and "Via: 1.1 vegur".
